Attachment to the Statement

Reporting Period	Eligible CO ₂ Removal
1 December 2022 to 7 April 2023	1.122 tCO ₂ e per dry tonne biochar

Verification Objective

EnergyLink Services was engaged to conduct an audit to validate that the audited body's calculation of CO₂ Removal from the production of biochar for the period 1 December 2022 to 7 April 2023 had been prepared in accordance with the Puro.earth Biochar Methodology Edition 2022 v2 and with reference to the eligibility requirements for a Production Facility.

Verification Scope

- Output Audit for the period 1 December 2022 to 7 April 2023 under the biochar CO₂ removal methodology: Puro.earth CO₂ Removal Marketplace General Rules v3.1.

Verification Level of Assurance

The verification was conducted by EnergyLink Services with a reasonable level of assurance. A reasonable assurance engagement in accordance with ISAE 3000 involves performing procedures to obtain evidence about the Production Facility process controls in accordance with *General Rules of the Puro.earth CO₂ Removal Marketplace*. There are inherent limitations in performing assurance—for example, assurance engagements are based on selective testing of the information being examined—and because of this, it is possible that fraud, error, or non-compliance may occur and not be detected. An assurance engagement is not designed to detect all misstatements, as an assurance engagement is not performed continuously throughout the period that is the subject of the engagement and the procedures are performed on a test basis. The conclusion expressed in this statement has been formed on the above basis.

Verification Criteria

The requirements applicable to the organisation is the *Puro.earth CO₂ Removal Marketplace General Rules*v3.1.
